

```

x5.java :
//Implementation of thread using multiple thread using runnable
public class ThreadEx5 implements Runnable
{
    public void run(){
        try{
            Thread.sleep(1500);
            System.out.println("Inside of thread");
        }
        catch(Exception e){
            System.out.println("Exception"+e);
        }
    }
    public static void main(String[] args) {

        for(int i=0;i<10;i++){
            Thread t1 =new Thread(new ThreadEx5());
            t1.start();
        }

        System.out.println("Outside of thread");
    }
}

```

```

ide of thread
de of thread
de of thread
de of thread
de of thread
de of thread
de of thread

```
